

RACHID

KESSERWANI

RAW MATERIALS COLLECTORS & EXPORTERS

COLLECT • RECOVER • REUSE

Tripoli, Lebanon | Established 1998

A legacy of recovery. A future of resources.

Established in 1998 in Tripoli, Lebanon, Rachid Kesserwani specializes in the collection and export of scrap metal and raw materials. The company works to recover useful materials from waste and connect them with recycling and industrial markets.

OUR STORY

As global needs change, our work focuses on collecting materials that have reached the end of their original use and giving them a route toward reuse and recycling.

By recovering valuable materials from waste, we support resource conservation and a more circular approach to materials.

FOUNDER

Leadership grounded in long-standing experience in recovered materials and international supply.

“We deliver sources, value and impact.”

Four material worlds. One supply chain.

A cleaner, more visual way to explore the Rachid Kesserwani portfolio.

- | | | |
|----|-----------------------------|---|
| 01 | FERROUS METAL | Steel, iron-based recovered materials and related scrap. |
| 02 | NON-FERROUS | Copper-rich, aluminium and other non-ferrous recovered materials. |
| 03 | INDUSTRIAL MACHINERY | Equipment and material-handling capabilities supporting recovery and preparation. |
| 04 | OTHER MATERIALS | Plastic scrap, PET, carton bales and other recyclable streams. |

OUR ROLE

**Collection • Sorting & preparation • Quality requirements
• Domestic & international freight • Export supply**

Ferrous Metal

Strength in recovered metal.

We supply ferrous-metal grades and used transformers in line with international standards, with client requirements for quality and delivery considered as part of the supply process.

Recovered steel / ferrous scrap

Mixed ferrous load prepared for shipment

FERROUS METAL

Strength in recovered metal. The exact grade, composition, quantity and delivery specification can be confirmed for each enquiry.

Non-Ferrous

Value in every recovered metal.

Our supplied imagery shows copper-rich wire, mixed non-ferrous pieces and compressed metal materials. These materials are presented as a distinct non-ferrous category for customers seeking recovered metal resources.

Copper-rich recovered wire

Compressed mixed non-ferrous material

NON-FERROUS

Value in every recovered metal. The exact grade, composition, quantity and delivery specification can be confirmed for each enquiry.

Industrial Machinery

The equipment behind recovery.

Material recovery depends on practical equipment for handling, conveying, compacting and loading. Our facility imagery shows processing and material-handling equipment used around recovered-material operations.

Material-handling / processing equipment

Conveying and processing environment

INDUSTRIAL MACHINERY

The equipment behind recovery. The exact grade, composition, quantity and delivery specification can be confirmed for each enquiry.

Other Materials

More recovered resources. More possibilities.

Beyond metals, our material portfolio includes plastic scrap and carton scrap. The existing company catalogue highlights year-round plastic scrap supply and carton scrap as a source of recycled materials.

Recovered carton bales

Compressed PET / plastic bales

OTHER MATERIALS

More recovered resources. More possibilities. The exact grade, composition, quantity and delivery specification can be confirmed for each enquiry.

PET & plastic scrap.

A high-volume material stream with an international supply story.

The existing company catalogue states that high-quality plastic scrap is offered throughout the year. It reports more than 1,000 containers shipped over the last decade to more than 20 countries.

1,000+

containers shipped over the last decade

20+

countries reached

Freight can be arranged on water or land, according to the existing company catalogue.

Recovery becomes value through process.

A clear material journey helps preserve quality, improve handling and meet the requirements of the destination market.

- | | | |
|----|---------|---|
| 01 | COLLECT | Source recovered materials from end-of-life and industrial streams. |
| 02 | SORT | Separate materials by type and practical commercial requirements. |
| 03 | PREPARE | Bale, compact, load or otherwise prepare materials for movement. |
| 04 | SHIP | Coordinate domestic or international freight by land or water. |
| 05 | DELIVER | Meet the agreed quality, quantity and delivery requirements. |

Local recovery. International destination.

The existing company catalogue describes international and domestic freight capability, with shipment arrangements by water or land to markets across continents.

LOGISTICS

- International freight
- Domestic freight
- Water shipment
- Land shipment
- Client-specific delivery requirements

MARKET ORIENTATION

Regular global-market exports are part of the company's stated operation.

CIRCULAR ECONOMY

Recover. Reuse. Reduce.

The company describes its work as part of a circular-economy approach: recovering valuable materials from waste can help reduce the need for new resource extraction and support reuse.

Experience built around material, quality and delivery.

01

ESTABLISHED EXPERIENCE

Operating in Tripoli since 1998.

02

MATERIAL RANGE

Ferrous, non-ferrous, industrial machinery capability and other recyclable material streams.

03

CLIENT REQUIREMENTS

The existing catalogue states that the team works closely with clients on quality and delivery requirements.

04

EXPORT ORIENTATION

The company reports regular exports to the global market, including plastic-scrap shipments to more than 20 countries.

SPECIFICATIONS

Material grades, composition, quantity, packaging, inspection, pricing and delivery terms should be confirmed for each transaction. Product availability may vary by shipment.
